

Mo.net Cloud

Managed Software as a Service

The demand for ever more complex financial models, the reduction in time between reporting cycles and the need for greater auditability may mean that businesses reach the limit of their current IT capacity. The options may seem clear: try to manage and accept the business risk or use more internal resources and more hardware.

The solution

Mo.net Cloud provides an alternative and more effective solution. It provides on-demand pre-configured Mo.net capacity in a secure cloud environment.

Working with our cloud partner, Solvinity, the solution offers:

- quick and seamless extension of your current physical hardware resources, all controlled from your infrastructure;
- scalable computing capacity for parallel running of Mo.net models in the cloud;
- access to pre-configured Mo.net Production Servers (source control, centralised model execution and automated testing);
- management of Mo.net licences and software versions;
- secure VPN connection to our servers and your data, stored in European Tier 3+ datacentre; and
- simple pricing scheme: pay for installation and per usage.

The benefits

Businesses will soon recognise the benefits of having access to on-demand secure and flexible computing power for either day-to-day

usage or to meet the requirements of individual projects:

- the complexity of adapting in-house capabilities and acquiring new skills is removed, and instead actuarial modelling teams can rely on outsourcing this function to trusted industry experts;
- utilising a flexible infrastructure will benefit from greatly reduced run times of models and/or allow you to build more precision into your calculations; and
- no capital investment of hardware and inefficient utilisation of resources - costs are aligned to capacity and usage.

Moving to a cloud solution involves an in-depth risk analysis for any business and we appreciate that it can be a complex decision. Our consultants are ready to help you through this process and to provide your business with the confidence in Mo.net Cloud and all the advantages it can offer.
